

# A STUDY ON COMMUNICATION PROCESS MANAGEMENT WITH REFERENCE TO TOYOTA

<sup>1</sup>ALLAKATTU SRIKAR, <sup>2</sup>Dr. D. SATHISH KUMAR

<sup>1</sup>MBA STUDENT, <sup>2</sup>ASSISTANT PROFESSOR

DEPARTMENT OF MBA

*Sree Chaitanya College of Engineering, KARIMNAGAR*

## ABSTRACT

Management is communication intensive and, therefore, managers may derive benefits from computer-based alternatives to the traditional communication modes of face-to-face (FTF), telephone, and written memo. This research examined the use of electronic messaging (EM) by ongoing management groups performing a cooperative task. By means of an in-depth multimethod case study of the editorial group of two daily newspapers, it examined the fit between the interactivity of the chosen communication mode (FTF vs. EM) and the mode of discourse it was used for (alternation vs. interaction/discussion). Two propositions were derived from this exploratory study. The first proposes that FTF, being highly interactive, is appropriate for building a shared interpretive context among group members, while CMC, being less interactive, is more appropriate for communicating *within* an established context. Groups exhibiting effective communication will use FTF primarily for interactive discourse and EM for discourse consisting primarily of alternating adjacency pairs. The second proposes that to the extent that the appropriate communication modes are chosen, communication will be more effective.

Communication is central to the main four management competencies outlined by Warren Bennis: the management of attention, meaning, trust and self. To be truly effective, both leaders and managers must develop their self-awareness, become role models for communication in the organization, and learn to encourage and manage constructive dissent. An important part of the communication professional's role is to support the organization's leaders and managers in developing their communication competence.

This research focuses on the communication of risk messages among organizations and particularly on communication between IT employees and managers within a bank in Greece. An important aspect of any information systems (IS) security activity is about ensuring the security of its infrastructure, and in doing so, communication is a key necessity for present e-banking security managers.

## I. INTRODUCTION

**Communication** is a process whereby information is enclosed in a package and is channeled and imparted by a sender to a receiver via some medium. The receiver then decodes the message and gives the sender a feedback. All forms of communication require a sender, a message, and an intended recipient, however the receiver need not be present or aware of the sender's intent to communicate at the time of communication in order for the act of communication to occur. Communication requires that all parties have an area of communicative commonality. There are verbal means using language and there are nonverbal means, such as body language, sign language, paralanguage, haptic communication, chronemics, and eye contact, through media, i.e., pictures, graphics and sound, and writing.

### Information communication revolutions

Over time, technology has progressed and has created new forms of and ideas about communication. The newer advances include media and communications psychology. Media psychology is an emerging field of study. These technological advances revolutionized the processes of communication. Researchers have divided how communication was transformed into three revolutionary stages:

In the 1st Information Communication Revolution, the first written communication began, with pictographs. These writings were made on stone, which were too heavy to transfer. During this era, written communication was not mobile, but nonetheless existed.

In the 2nd Information Communication Revolution, writing began to appear on paper, papyrus, clay, wax, etc. Common alphabets were introduced, allowing the uniformity of language across large distances. Much later the Gutenberg printing-press was invented. Gutenberg created this printing-press after a long period of time in the 15th century.

In the 3rd Information Communication Revolution, information can now be transferred via controlled waves and electronic signals.

Communication is thus a process by which meaning is assigned and conveyed in an attempt to create shared understanding. This process requires a vast repertoire of skills in interpersonal processing, listening, observing, speaking, questioning, analyzing, gestures and evaluating. It is through communication that collaboration and cooperation occur.

There are also many common barriers to successful communication, two of which are **message overload** (when a person receives too many messages at the same time), and **message complexity**. Communication is a continuous process. The psychology of media communications is an emerging area of increasing attention and study.

## II. NEED & IMPORTANCE OF THE STUDY:

The need of the Communication Process as management is to determine what aspects of performance are required to be evaluated.

- To identify those who are performing their assigned task well and those who are not and the reason for such performance.

- To provide information about the Communication Process as management basing on which decisions regarded conformation, promotion, demotion and transfer are taken.
- To provide feedback information about the level of achievements and behavior of an employee.
- To provide information and counsel the employee.
- To compare actual performance with the standards and in out deviations (positive and negative)
- To create and maintain satisfactory level of performance.
- To prevent grievance and in disciplinary activity.
- To facilitate fair and equitable compensation.
- To ensure organizational effectiveness.
- It guarantees useful information about employees and the nature of their duties.

We can briefly say that Communication Process as management systems are necessities to assess performance at regular intervals with consistency to study improvements, deviation and to take corrective actions to bride gaps and improve performance over a period of time.

## III. OBJECTIVES:

The objective is to know how effective is the execution of Communication Process as management in TOYOTA, Hyderabad.

The aim of Communication Process as management is to encourage the employees to set his own objective for the next time period following the review of his past performance. It enables the management to make effective decisions/ to modify earlier decisions based on the evaluation of the existing plans, information system, job analysis, and internal and external environment factors influencing employee performance.

The objectives is to identify the common goals of the organization, define each individuals major areas of responsibility in terms results expected of him, review the individual performance progress in a job and his potential for future improvement. It aims at providing data to managers with whom they may judge future job assignments and compensation.

To counsel the employees Communication Process regarding their strengths and weaknesses and asses in developing them to realize they are full potential in line with the company's objectives and goals. Always emphasize that the role of a manager is to offer constructive support and not condemn. Give the employees many opportunities to ask guidance to air grievances and discuss anxieties

#### IV. SCOPE OF THE STUDY:

In the present study an attempt has been made to know the actual implementation of Communication Process as management techniques in general and some other aspects such as awareness of the workers, effectiveness of the performance appraisal system in particular.

Human resource projections are valid on appraisals. By improving job skills, the employees have lot of scope for development and prepare themselves for higher responsibilities.

A through analysis of the performance appraisal system will help the management to know the short comings, if any. It also help the company in knowing whether the performance appraisal techniques are used to full extent or not, there by the researcher can understand the effective implement of the performance appraisal system.

#### V. METHODOLOGY & DATABASE:

The research methodology is a systematic way to solve the problem and it is an important component of the study without which researcher may not be able to obtain the facts and figures from the employees.

#### SOURCE OF DATA:

The study is based on primary as well as secondary data collected from different sources:

##### A). Primary Data:

The primary data is collected with the help of questionnaires, which consists of twenty questions each. The questionnaires are chosen because of its simplicity and liability. Researcher can expect straight answers to the questions. The respondents are informed about the significant of the study and requested to give their fair opinions.

##### B). Secondary Data:

Secondary data is collected through the documents provided by the personnel department. The documents include personnel manuals, books, reports, journal, etc.

#### SAMPLING PROCESS:

##### A). Sample Unit:

The executives and employed at TOYOTA. Hyderabad constitute 'universe' of the present study. A part of it is taken as sample unit for the resent study. It includes JGMS, AGMS, manager and other employees of TOYOTA Hyderabad.

##### B). Sample Size:

The sample size consists of 100 respondents employed in TOYOTA, Hyderabad. Of these 30 are executives, 20 are senior executives and the remaining 50 are employees.

#### PERIOD OF THE STUDY:

Since so many years TOYOTA Hyderabad has been following the same procedure of Communication Process for their executives and employees and for the study of my project last one-year data has collected on performance appraisals.

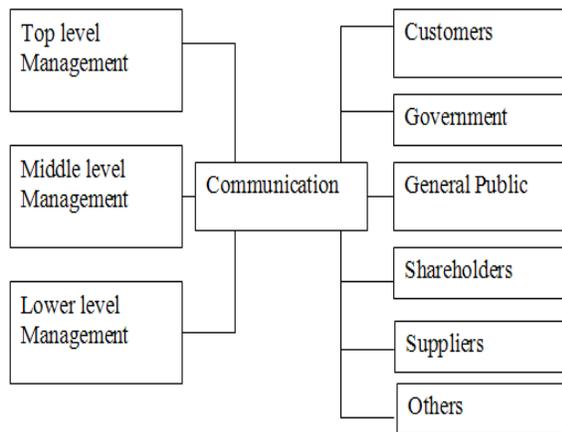

#### VI. LIMITATIONS

1. Firstly the respondents were not available readily and the data were collected as per the convenience of the respondents.

2. Secondly the sample of respondents was very less given by the organization hence appropriate sample technique was not applied for selecting the respondents.
3. Thirdly, time is also one of constraints. Duration of 45 days is not sufficient to cover all the aspects of the study.

For the above limitation the study conducted may not give the true representation of the entire organization.

### THE PROCESS OF COMMUNICATION

As such there are three steps involved in the communication process. It is the origin of a thought or an idea by a sender which is properly planned and then passed on to the receiver in a manner in which it can be properly understood.

The Communication Process.

- **The message sender**

Communication begins when the sender comes across a thought or an idea. The sender then encodes it in a way in which it can be understood by the receiving channel members. Encoding is not simply translation or to put forward an idea, but includes additions, deletions and simplifications in the line of thought and conversion and the same in the form of a message to be transferred further down the line. It also may include technical details such as encoding the message in a programmed language as an input for computer.

- **Transmission of Message**

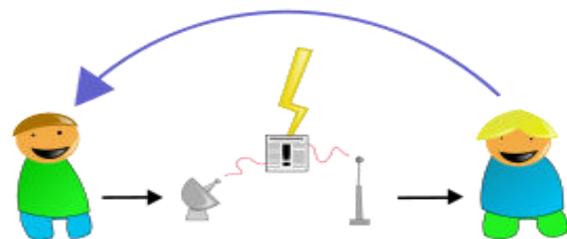

There needs to be a link between the sender of the message and receiver of the message. These links or mediums may be written or oral. The messages are transmitted through a letter, a telegram, telephone, computer, etc. Sometimes, more than one link also may be used for the transmission of messages.

### The message receiver

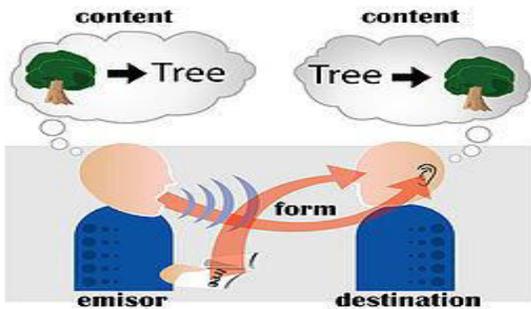

The message has to reach the receiver in a form in which it is understandable. The message received has to be decoded. It is to be converted into the original thought or idea. Accurate communication can occur only when both, the sender and the receiver attach similar meanings to the symbols that compose the message. The crux is in the message being understood. The emphasis is not simply in the transfer of the message but such a transfer where facts remain intact and the real message does not get distorted. It is necessary to receive a message with an open mind because if the information is contrary to the value system of the individual, a closed mind will normally not accept it.

To verify the effectiveness of communication, feedback is necessary. Whether or not a message has been clearly transmitted and understood can be confirmed by feedback. Feedback helps in analyzing whether the objective has been achieved or not.

### Communication modeling

Shannon and Weaver Model of Communication

Communication major dimensions scheme

The first major model for communication came in 1949 by Claude Shannon and Warren Weaver for Bell Laboratories. The original model was designed to mirror the functioning of radio and telephone technologies. Their initial model consisted of three primary parts: sender, channel, and receiver. The sender was the part of a telephone a person spoke into, the channel was the telephone itself, and the receiver was the part of the phone where one could hear the other person. Shannon and Weaver also recognized that often there is static that interferes with one listening to a telephone conversation, which they deemed noise.

In a simple model, often referred to as the transmission model or standard view of communication, information or content (e.g. a message in natural language) is sent in some form (as spoken language) from an emisor/ sender/ encoder to a destination/ receiver/ decoder. This common conception of communication simply views communication as a means of sending and receiving information. The strengths of this model are simplicity, generality, and quantifiability. Social scientists Claude Shannon and Warren Weaver structured this model based on the following elements:

1. An information source, which produces a message.
2. A transmitter, which encodes the message into signals
3. A channel, to which signals are adapted for transmission
4. A receiver, which 'decodes' (reconstructs) the message from the signal.

5. A destination, where the message arrives.

Shannon and Weaver argued that there were three levels of problems for communication within this theory.

The technical problem: how accurately can the message be transmitted?

The semantic problem: how precisely is the meaning 'conveyed'?

The effectiveness problem: how effectively does the received meaning affect behavior?

Daniel Chandler critiques the transmission model by stating

It assumes communicators are isolated individuals.

No allowance for differing purposes.

No allowance for differing interpretations.

No allowance for unequal power relations.

No allowance for situational contexts.

### Communication noise

In any communication model, noise is interference with the decoding of messages sent over a channel by an encoder. There are many examples of noise:

**Environmental Noise:** Noise that physically disrupts communication, such as standing next to loud speakers at a party, or the noise from a construction site next to a classroom making it difficult to hear the professor.

**Physiological-Impairment Noise:** Physical maladies that prevent effective communication, such as actual deafness or blindness preventing messages from being received as they were intended.

**Semantic Noise:** Different interpretations of the meanings of certain words. For example, the word "weed" can be interpreted as an undesirable plant in your yard, or as a euphemism for marijuana.

**Syntactical Noise:** Mistakes in grammar can disrupt communication, such as abrupt changes in verb tense during a sentence.

**Organizational Noise:** Poorly structured communication can prevent the receiver from accurate interpretation. For example, unclear and badly stated directions can make the receiver even more lost.

**Cultural Noise:** Stereotypical assumptions can cause misunderstandings, such as unintentionally offending a non-Christian person by wishing them a "Merry Christmas."

**Psychological Noise:** Certain attitudes can also make communication difficult. For instance, great anger or sadness may cause someone to lose focus on the present moment. Disorders such as Autism may also severely hamper effective communication.

### Communication as academic discipline

Communication as an academic discipline, sometimes called "communicology," relates to all the ways we communicate, so it embraces a large body of study and knowledge. The communication discipline includes both verbal and nonverbal messages. A body of scholarship all about communication is presented and explained in textbooks, electronic publications, and academic journals. In the journals, researchers report the results of studies that are the basis for an ever-expanding understanding of how we all communicate.

Communication happens at many levels (even for one single action), in many different ways, and for most beings, as well as certain machines. Several, if not all, fields of study dedicate a portion of attention to communication, so when speaking about communication it is very important to be sure about what aspects of communication one is speaking about. Definitions of communication range widely, some recognizing that animals can communicate with each other as well as human beings, and some are more narrow, only including human beings within the different parameters of human symbolic interaction.

### Communication theory

Human communication is understood in various ways by those who identify with the field. This diversity is the result of communication being a relatively young field of study, composed of a very broad constituency of disciplines. It includes work taken from scholars of Rhetoric, Journalism, Sociology, Psychology, Anthropology, and Semiotics, among others. Cognate areas include biocommunication, which investigates communicative processes within and among non-humans such as bacteria, animals, fungi and plants, and information theory, which provides a mathematical model for measuring communication within and among systems.

Generally, human communication is concerned with the making of meaning and the exchange of understanding. One model of communication considers it from the perspective of transmitting information from one person to another. In fact, many scholars of communication take this as a working definition, and use Lasswell's maxim, "who says what to whom in what channel with what effect," as a means of circumscribing the field of **communication theory**. Among those who subscribe to the transmission model are those who identify themselves with the communication sciences, and finds its roots in the studies of propaganda and mass media of the early 20th century.

A simple communication model with a sender transferring a message containing information to a receiver.

Other commentators claim that a ritual process of communication exists, one not artificially divorcible from a particular historical and social context. This tradition is largely associated with early scholars of symbolic interactionism as well as phenomenologists.

### Constructionist Models

There is an additional working definition of communication to consider that authors like Richard A. Lanham (2003) and as far back as Erving Goffman (1959) have highlighted. This is a progression from Lasswell's attempt to define human communication through to this century and revolutionized into the constructionist model. Constructionists believe that the process of communication is in itself the only messages that exist. The packaging can not be separated from the social and historical context from which it arose, therefore the substance to look at in communication theory is style for Richard Lanham and the performance of self for Erving Goffman.

Lanham chose to view communication as the rival to the over encompassing use of CBS model (which pursued to further the transmission model). CBS model argues that clarity, brevity, and sincerity are the only purpose to prose discourse, therefore communication. Lanham wrote, "If words matter too, if the whole range of human motive is seen as animating prose discourse, then rhetoric analysis leads us to the essential questions about prose style" (Lanham 10). This is saying that rhetoric and style are fundamentally important; they are not errors to what we actually intend to transmit. The process which we construct and deconstruct meaning deserves analysis.

Erving Goffman sees the performance of self as the most important frame to understand communication. Goffman wrote, "What does seem to be required of the individual is that he learn enough pieces of expression to be able to 'fill in' and manage, more or less, any part that he is likely to be given" (Goffman 73) Goffman is highlighting the significance of expression. The truth in both cases is the articulation of the message and the package as one. The construction of the message from social and historical context is the seed as is the pre-existing message is for the transmission model. Therefore any look into communication theory should include the possibilities drafted by such great scholars as Richard A. Lanham and Erving Goffman that style and performance is the whole process.

Communication stands so deeply rooted in human behaviors and the structures of society that scholars have difficulty thinking of it while excluding social or behavioral events. Because communication theory remains a relatively young field of inquiry and integrates itself with other disciplines such as philosophy, psychology, and sociology, one probably cannot yet expect a consensus conceptualization of communication across disciplines.

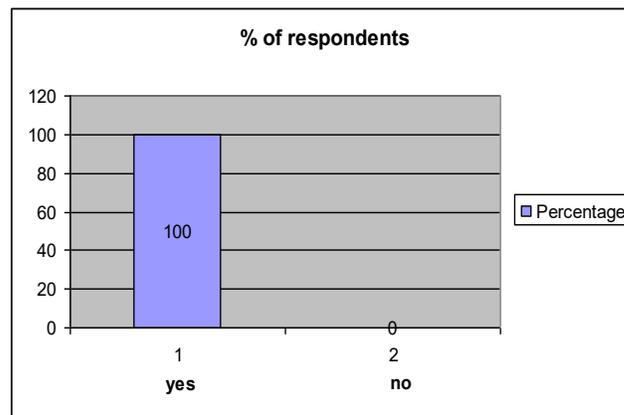

### VII. DATA ANALYSIS AND INTERPRETATION

1. Do you think Communication Process management is needed in a company?

(a) YES

(b) NO

s.no	Options	No. of Responses	Percentage
1	YES	100	100
2	NO	0	0
	TOTAL	100	100

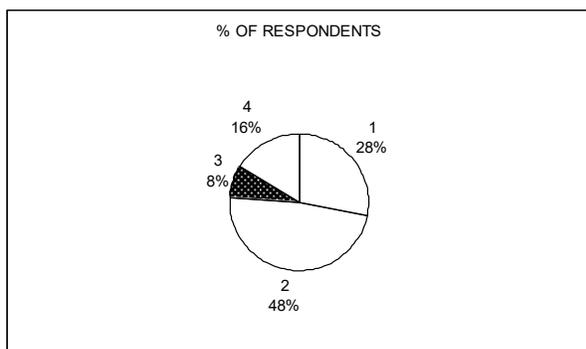

#### Interpretation:

To above question, almost 100% of the employees thought that the Communication Process management is needed in a company.

2. Communication Process management rating is used to

- (a) Identify areas of improvement
- (b) Identifying quality for unit of work
- (c) Set performance target
- (d) All the above

s.no	Options	No. of Responses	Percentage
1	Identify areas of improvement	28	28
2	Identify areas of training & development	48	48
3	Set performance target	8	8
4	All the above	16	16
	Total	100	100

**Interpretation:**

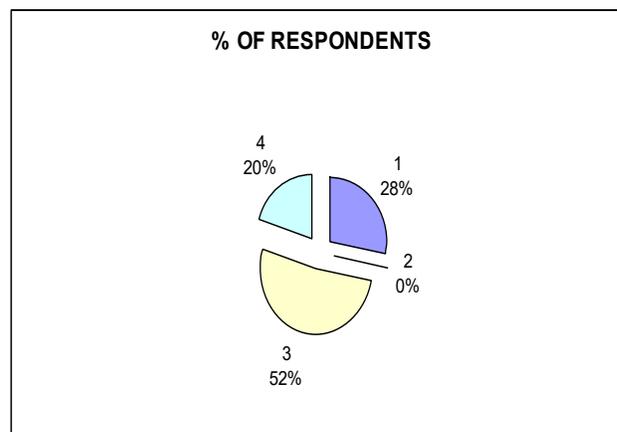

About the usefulness of Communication Process management, 28% have said that appraisal system helped them to identify areas of improvement, to 48% it helped in identifying

training & development needs, to 8% it helped in setting performance targets and to 16% it was helpful in all the above areas. By this we can say that P.A is helpful in one way or the other for the employees.

3. In your experience the outstanding Communication management of an employee is due to:

- (a) Actual Performance
- (b) Qualification
- (c) Experience
- (d) All the above

s.no	Options	No. of Responses	Percentage
1	Actual Performance	28	28
2	Qualification	0	0
3	Experience	52	52
4	All the above	20	20
	total	100	100

**Interpretation:**

Above 28% of the employees responded that the outstanding Performance appraisal is due to Actual Performance, 52% of the employees is due to Experience and 20% of the employees is due to all the above.

## VIII . CONCLUSION

Based on the findings of the study and personal discussions held with various executives and employees at TOYOTA. Hyderabad possible suggestions and recommendations are given:

- It is recommended that employees should be immediately communicated.
- The result of the appraisal particularly when they are negative.
- It is recommended that the supervisor should try to analyze the strengths and weaknesses of an employee and advise him on correcting the weakness.
- It is commended to counsel the employees appropriately regarding their strength and weaknesses and assist in developing them to realize their full potential in line with the company's goals.
- The top management is very much committed in implementing the Communication Process system as it is. The Communication Process system is consider as an essential tool for bridging gap between the top management and the executives it thus helps them to develop cordial relations and mutual understanding.
- It is recommended that the employees should be communicated information about his performance, again his acceptance of it and draw up a plan for future improvement, if necessary.
- It is recommended that the rater must be thoroughly well versed in the philosophy and of the rating system. Factor sales must be thoroughly defined, analyzed and discussed.

To conclude, it is imperative to immunize of the problems or hindrances to strengthen the system.
